

Intikom Managed Security Services (MSS)

Everyday attackers are moving at faster rate than companies' capability to prevent, and respond to the attacks. Find out how Intikom MSS can help you to regain control of your security defenses.

OVERVIEW

Traditional Cybersecurity approach has failed to counter recent cyber-attacks. The attackers use sophisticated tools and with a lot of entry points to your environments, pinpoint security solutions are becoming too complex, pumping out too many alerts, thus not only increasing the time to locate and respond to the attacks, but also increasing chance of attackers succeeding in data breaches.

WHY INTIKOM MSS?

Managing security by yourself is stressful enough, not only it is never ending, but cyber threat landscape transforms so many times, that it is easier to have it managed outsourced. Intikom has invested in tools, people and technology in order to give yourself peace of mind when it comes to managing security.

BENEFITS

Security Tuning

Intikom MSS is more than just a managed SIEM. We onboard log and flow sources, do a lot of tuning and optimization by assessing your environment to ensure better hit rate and avoid false positives.

Reduced Alert Fatigue

Intikom MSS helps you look into your security alerts, prioritize the alerts, thus increasing MTTR (Mean Time to Resolve) and improve your productivity.

Investigation Reports

Our Intermediate and Advanced MSS services (for details please refer to the table below), we give out insights on how critical attacks unfold, thus we can look into its movement in the environment and contain it in detail.

Risk Based Services

Enables customers to pay for the necessary level of security that you need. Giving you the opportunity to look into your security posture, and leverage your existing infrastructure value.

Weekly & Monthly Cyber Threat Reports

We deliver cyber threat reports every week and every month, give out insights on how your security posture is, and the potential risk that your environment has.

Managed Detection & Response

Our Intermediate and Advanced MSS services (for details please refer to the table below), we protect and respond to the attacks. Combined with our Threat Intelligence from IBM, and our security analysts, we can effectively locate, contain, and remediate the incidents by remote
